**Our Vision**

To be a P-10 school community where the culture and environment are led by quality teaching and learning.

Our students will be confident and engaged learners, and active and successful citizens of tomorrow.
Death Cap mushrooms are one of the world’s deadliest mushrooms and can be found across the Canberra region, usually in late summer and autumn. There have been four deaths and many poisonings in the ACT in the past 15 years due to Death Cap mushrooms.

In Canberra, Death Cap mushrooms often grow near established oak trees in mild, moist weather. Death Cap mushrooms have been found growing on school grounds in the ACT.

Parents and teachers are asked to remind children not to touch, pick or eat any wild mushrooms. As the Death Cap mushroom can easily be confused with edible varieties, adults are also strongly advised not to touch, pick or eat any wild mushrooms. It is difficult, even for experienced collectors, to tell the difference between the Death Cap mushroom and edible wild mushrooms.

All parts of the Death Cap mushroom are poisonous and eating even a small amount of the mushroom can be fatal. Cooking the Death Cap mushroom does not make it safe.

If you suspect that you or one of your family members might have eaten Death Cap mushrooms, you should seek urgent medical attention at a hospital emergency department.

If you believe you have spotted a Death Cap mushroom, do not touch the mushroom with your bare skin. If it is in your own yard, the best option is to leave it be and make sure others stay away from the area. The mushroom will die in a few days.

If you believe you have spotted a Death Cap mushroom growing in a public area, please contact Canberra Connect on 13 22 81.
